

Allovita

Allovita is a range of high bioavailable nature products for humans and animals, which is available in both liquid concentrate and powder form. The products contains ingredients such as blueberries, ginseng, garlic, and rosehip – all in the best quality. By utilising these ingredient's individual properties and qualities we create animals in harmony and well-being without using any unnatural and artificial produced ingredients.

As of June 29th 2016 we have been ISO 22000 certified, which means that our Allovita concentrate is offered for humans as a dietary supplement. The product has a positive effect on the immune system and consists of only natural ingredients without any kind of artificial content.

ISO 22000 certified

About Allovita

Allo 2009 ApS is a Danish, family owned company, which since 2000 has specialized in the production of the Allovita products, that are developed based on a scientific study. We solely use natural quality ingredients such as blueberries, rosehips, ginseng, and garlic, that altogether creates a product with high bioavailable effects, which particularly benefits animals immune system and nervous system and thereby contribute to create animals in harmony and well-being. One of our goals is to reduce the CO2 emission, which we do by being a part of a EU/region project called *Remains to Resource* [Rest til ressource] where different companies share the idea of making one company's remains to another company's resource.

At Allo 2009 ApS we wish at any time to meet existing legal and regulatory requirements and specific requests from our customers and also to meet our own standards regarding high quality and food safety in our products. The Danish Veterinary and Food Administration regularly approve Allo 2009 ApS as we wish that our management system regarding food safety can compare with the international and best practise for food safety.

Therefore, we have as of June 29th 2016 been certified with the ISO 22000 certificate, which meets the before-mentioned requirements. Thus, our customers and business partners are ensured a solution where there not only is selected quality ingredients but also a product that meets an international standard.

Our production technique and efficiency are under an ongoing research and development so we can offer the market's best quality and create products, which are customized to individual requirements and operational conditions. The development and enhancement of our products involve skilled employees with up to 20 years of experience, external expertise, and a close cooperation with costumers and authorities.

Since 2009 the Allovita products has spread to several countries in Europe, thus our export is growing concurrently with the global demand for this generation of innovative product lines.

Research and Results

For our Allovita products, we use ingredients – respectively garlic, blueberries, ginseng, and rosehip – that are carefully selected because of their beneficial qualities, which all contribute to a positive stimulation of the immune system and nervous system.

The Allovita product's ingredients

Garlic contains allicin, which has an antibacterial effect. When the allicin ends up in the intestine the (sulphur) compound look for specific enzymes, which are released from harmful bacteria, fungus, and viruses, and the allicin finds its way into the bacteria's core and destroy this from within.

When treating with antibiotic, this connects to the receptors, which is placed on every single bacteria – both the good and bad. Consequently, the animal is exposed for unnecessary influence on the good bacteria in case of an antibiotic treatment, while the use of Allovita products alone break down the harmful and damaging bacteria.

ISO 22000 certified

Blueberries are selected because of its immeasurable source of B-complex and furthermore contains some of the most powerful antioxidants. While rosehip has a high content of vitamin C, which has an impact on the immune system and contributes to the protection against bacteria and viruses, ginseng has a stress moderating effect.

A pioneering interaction

The most path-breaking is these four ingredient's combination, which compliments one another to a degree where the body's immune system and nervous system are stimulated positively. Therefore, by using the Allovita products, the medicine consumption can be reduced by natural products, which creates animals in harmony and well-being.

Products has

We have a broad selection of various products within the Allovita range, which all possess the individual ingredient's good qualities. We offer both pre-mixed products that meets the average customer's needs, but also products specially produced to the individual's needs.

We produce products that are suitable for pigs, chickens, fur-bearing animals, cows, horses, dogs, and cats, which all can benefit from the Allovita products beneficial effects.

Do not hesitate to contact us if you are interested in the Allovita products and we will assist you in finding the right solution for you.

Allovita concentrate

The Allovita concentrate contains the unique mixture of garlic, rosehip, blueberry, and ginseng that contribute to re-start the immune system, enhance the mobility in the joints, and to reduce the stress level among all kinds of livestock.

The Allovita concentrate is our booster and is included in ALL mixtures. Contrary, when you purchase regular b-complex, vitamin E, or other supplements to your animals that do not contain the Allovita concentrate, you will not obtain the vitamin's full effect. The Allovita concentrate is able to utilize the vitamin's effects to a greater extend because it creates a homogeneous mixture, which the animal more easily can absorb.

Allovita concentrate – now also a dietary supplement for humans

Earlier, the Allovita range have only been offered for animal, where many livestocks worldwide have experienced positive results. But now, humans can also benefit from the Allovita range's golden drops. The product range has been expanded to also include a dietary supplement for humans, where i.a. COPD-patients and people in other course of a disease have experienced great results for their immune system. The dietary supplement consists, just as the rest of the Allovita range, only of natural ingredients without any kinds of artificially produced content.

We offer the dietary supplements in bottles of 50 ml. with drop dispensing for DKK 250.

B-komplex

B-complex is a broad-spectrum product that is particularly beneficial for high-yielding animals such as pigs, fur-bearing animals, and cows. The b-complex affects the hair in a positive direction, just like it also can be used in connection with the appetite.

By use of Allovita b-complex while using medication the intestinal flora can be stabilised and thereby create a good effect of the medication and a good economy for the manufacturer.

Products (continued)

Allovita bio-E

Vitamin E deficiency is among other things indicated by low performance, reproduction problems, disease, and poor immunity in general, which Allovita bio-E can cure.

Allovita multi

This mixture consists of many different vitamins, which is suitable all year round. Furthermore, the mixture is very homogeneous and is especially beneficial for fur-bearing animals and pigs.

Allovita powder

This product is the future's additive for premix mixtures for feed centrals and kitchen, and home mixer or for use as a top dressing for all animals. The product contributes to strengthen to immune system through its natural absorption just as it significantly reduces the stress level.
